Nisarg Shah

Three topics that I have used in this prototype are:

- I utilized High level process breakdown and built several different Lo-fi prototypes according to my sitemap as it helped me to refine my sitemap and also develop more ideas to implement.
- I have designed my Lo-Fi prototypes by keeping physical constraints in mind. So that the website is more discoverable and tasks can be executed effectively with no special training.
- I implemented fast feedback cycle here the feedback was taken from my group members to ensure I am not missing any major functionality.
